Kitting Service

Whether your project is small or large, kitted materials are a convenient and organized way to have the parts you need at hand. There's no need to run for parts with this labor- and time-saving solution!

What are kits?

Kits are either 17-gallon or 27-gallon plastic bins that house materials for a room, a floor or other specific area.

What products can be kitted?

The ideal products are smaller items such as devices, wall plates, wire nuts, for example. There are no limitations as long as it fits in the bin. Should you have more items than fits in a single bin, *a second bin will be suggested.*

How much lead time is needed to build a kit?

Kits can be delivered in roughly 3-5 business days from time of order.

Can I tell you what day and where to deliver the kit?

Yes! When you order, simply let us know. We can work with you to develop a complete plan to drop multiple kits at different times if necessary.

How do I order Kit Service?

Place your order with Inside Sales. They will enter all the necessary info to arrange for your material to be picked, kitted and delivered.

How is it delivered?

Each kit is packed with a copy of the order inside the plastic bin. The bin is secured with cable ties and shipped via Schaedler Yesco truck.

What does it cost?

The cost for this valuable service depends on the bin size needed, the number of bins, and other project factors. Your Inside Sales rep can help you determine cost.
