

Smart Home/Smart Office

Rob McGuinness

State of the industry

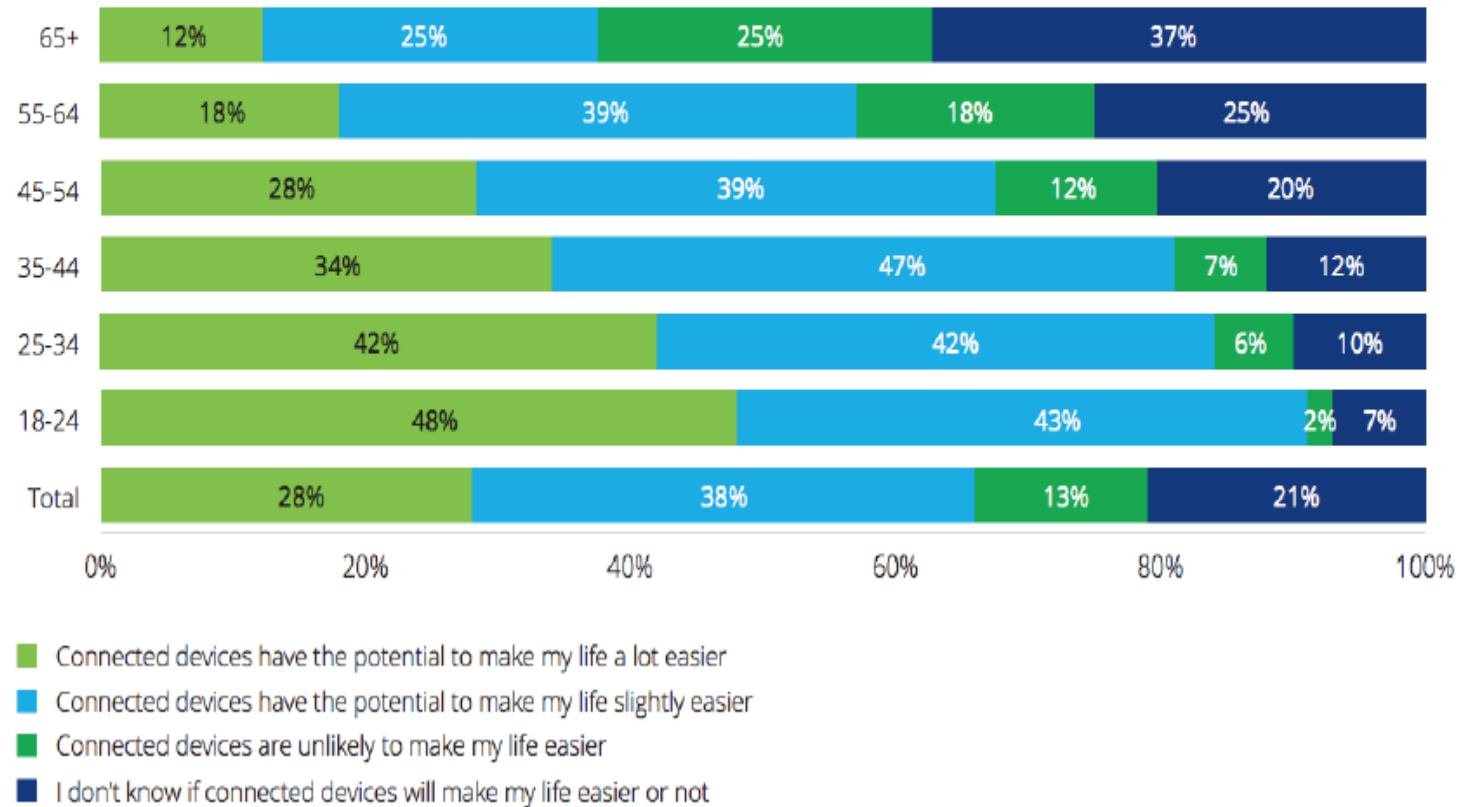

- **31% CAGR 2015-2020**
- **\$107 billion global market** estimated by **2023**
- Smart lighting household penetration to **double by 2022**

US Smart Homes as a Percent of Total US Households

Consumer Perceptions

- Homeowners see the industry as **fragmented**
- Interfaces can be “**clunky**”
- Products can be **unreliable** and fail
- Smart home products are **too expensive**
- Lack of **perceived benefit**

Base: UK consumers 18+ (n = 2076)

New Construction

Ratio of existing homes sold to new homes sold

9:1

New Construction

Why are builders adding Smart Home technology?

- Make the existing home **obsolete**
- **Differentiation** within the marketplace
- Cost of technology is easily **rolled into a mortgage**
- Increase **resale value** of the home
- Smart Home Tech's **perceived value** exceeds true cost for homeowner

New Construction Key Consideration:
Does the device perform its core function reliably?

Secondary Considerations:

- What does it work with?

 **LUTRON** • Will the device integrate with the biggest names in the industry?

Influencing **Factors**

People
want
products
that...

Solve **problems**

Save **energy**

Are **reliable**

Are **easy to install and use**

Product Categories

Entertainment

- Speakers, TVs, etc.

Appliances

- Refrigerators, Ovens, Washer/Dryers etc.

Security

- Door locks, cameras, window sensors

HVAC

- Thermostats, heaters

Lighting

- Dimmers, bulbs, window treatments

Appliances consumers are most likely to replace with a connected device

Source: Deloitte

Centralized **System** overview

Applications

- New construction & major renovation

Configuration

- Panel based
- Device wiring is 'home-run' to panel

Communication

- Low voltage wiring

Centralized **System**

pros & cons

Benefits

Clean aesthetic

- No need to have physical dimmers take up wall space

Devices have few physical limitations

- No need for RF, all metal construction is possible

More flexibility in placing devices

- No need to worry about distance for communication
- Able to communicate over further distances

Instantaneous communication

Limitations

Requires Prewiring

- Limited application for retrofit
- Difficult to add new devices after wiring is setup

Localized **System** overview

Applications

- Retrofit & new construction

Configuration

- Mix of dimmers, switches, and keypads

Communication

- Typically wireless (RF)

Localized **System**

pros & cons

Benefits

Retrofittable

- Uses existing wiring

Expandable

- Adding additional devices is simple

Limitations

Physical device space

- Wall space needed to house physical dimmers and switches

Device design limitations

- RF requirement leads to certain design limitations

Hybrid **System** overview

- **Applications**

- Typically new construction or expansion of centralized system

- **Configuration**

- Combination of panels and wireless devices

- **Communication**

- Wired & Wireless

Hybrid **System**

pros & cons

Benefits

Flexibility

- Initial setup uses prewiring
- Add wireless devices to system afterwards w/ existing wiring

Limitations

Physical device space

- Wall space needed to house physical dimmers and switches

Device design limitations

- RF requirement leads to certain design limitations

Lighting control **design**

New construction

- A single keypad can **replace an entire bank of traditional light switches**
- Move all switches & dimmers to **central location**
- Panelized **control**

Retrofit

- Reduce number of gangs required using **hybrid keypads**
- Keypads provide aesthetic enhancement over traditional switches

Relax

Entertain

Why Smart Lighting?

Convenience

- Turn off all the lights with the touch of a button

Aesthetics

- Spotlighting can highlight artwork and décor
- Reduce clutter by replacing switches with keypads

Security

- Automatically turn on all the lights when an alarm is triggered
- Set lights to randomly turn on and off while away to make the home seem occupied

Energy-Savings

- Dimming saves energy and extends bulb life

Smart Shading

Why **Smart Shades?** accessibility

10-20%

of manual shades are actively controlled

45-75%

of shades do not move at all

Source: UC Berkeley, 2005

Why **Smart Shades?**

automation

- Wake up to **natural daylight**
- Automatically lower at night for **privacy**
- Give the appearance of an **occupied home**

Why **Smart Shades?**

safety & security

- Cordless design, safe for children
- Automatically raise shades when alarm is tripped
- Raise shades when smoke detector is triggered

Why Smart Shades?

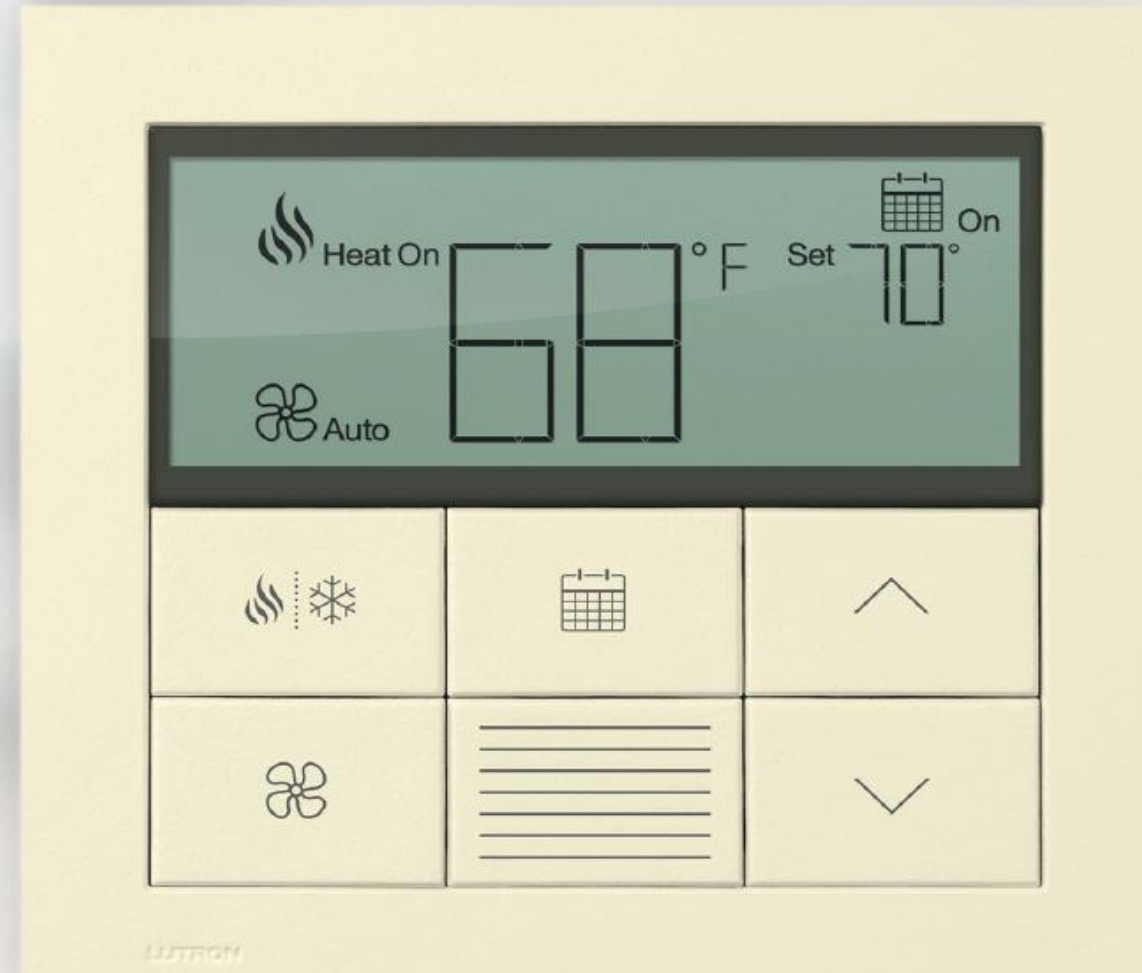

convenience

- Lower shades for a movie with a **button press**
- Quiet operation and alignment

Smart Thermostats

- **Automatically adapts** to owner preferences
- Heats and cools to perfect temperatures **based on usage**
- **Reduces energy consumption** when you leave the house
- **Remotely adjust temperature** for guests and visitors

Smart **Speakers**

overview

What makes a speaker **smart**?

speaker

microphone

internet connection

Smart Speakers

overview

- **1 in 5** US adults own a smart speaker
- All major smart phones **include voice assistants**
- Voice assistants are being integrated into cars, appliances, offices, etc.
- How to make natural voice commands “I’m leaving” vs “turn on all off”

19.7% of U.S. Adults Use Smart Speakers

Source: Voicebot Smart Speaker Consumer Adoption Report January 2018

Source: Voicebot

Smart Speakers

usage

- Most popular overall uses
 - General questions (60%)
 - Weather (57%)
 - Music (54%)
- Home automation use is increasing (27%)
- Most popular Smart Home uses
 - 1st Lighting
 - 2nd Thermostats
 - 3rd Door Locks

Preferred Smart Home Products for Personal Assistant Control

Among Specified Device Owners or Services Subscribers

Smart **Speakers**

smart home applications

- Voice user interface (VUI) allows for seamless integration across platforms with **one consistent experience**
- Smart speakers can pull in names for scenes and actions from smart home products **without much additional setup required**

Smart **Speakers**

smart home applications

- Using one voice command, a homeowner can initiate a **sequence of events**

“I’m Leaving!”

| **turns off** the lights and tv

| **closes** the shades

| **lowers** the temperature

| **activates** an alarm system

| **locks** the door

Integration

For the promise of the Smart Home to become a reality, products need to work together and **create seamless experience.**

Integration

evaluation **criteria**

Interference with/from other networks

- Does the technology require a site survey?
- Are you restricted from adding other equipment (routers, Bluetooth devices, etc.)?

Frequency

- Higher frequency: more attenuation and bandwidth competition
- Lower frequency: only communicates when needed

Range

- Look out for “works up to...”

FCC regulations

- Power
- Duty cycle

Fixed vs. mesh network

Local Integration

benefits and limitations

Benefits

- Does **not require** an internet connection
- Fewer communication delays

Limitations

- More **limited capabilities** than cloud-based integration
- More complicated remote access setup

Cloud **Integration**

overview

Integrating companies have internet-connected servers in **different physical locations**

Cloud **Integration**

benefits

- Increased **security** (requires inside-out connection)
- **Reduces physical space** needed in devices
- Additional **functionality** (voice control, geofencing, remote access)
- **Serviceability** is easier (automatic updates)

Security

overview

In order to make a smart home as secure as possible:

- **Create strong passwords** for devices and logins
- **Enable two-factor authentication** when possible
- **Keep firmware updated** to the latest version

Lutron Caseta

- Total home control for spaces up to 3,500 sq feet
- 75 device limit with smart bridge
- Lutron's patented Clear Connect technology
- Pair any dimmer, switch, lamp dimmer, fan control or outdoor smart plug with a pico
- Most connected smart home product in mid-mass market.

Provides many ways to control your lights!
